SUMMARY

Product leader with 9 years building data-driven products at the intersection of AI, AdTech, and B2B SaaS. Currently Head of Product at Voiro — a revenue intelligence platform for digital publishers — where I own and drive the full product roadmap across AI features, integrations, and core platform. Define product strategy, set OKRs, and lead a team of PMs to deliver against business outcomes. Built revenue workflow and intelligence infrastructure powering the AdTech operations of publishers including Flipkart, Myntra, Zee5, and Carrefour — spanning order management system, revenue reconciliation, pacing, DSP/SSP integrations, and AI-powered querying.

EXPERIENCE

Senior Product Manager | Head of Product | *Voiro Technology* Sep 2024 – Present · Bangalore

- Lead product for an AI-first B2B SaaS revenue intelligence platform, owning a roadmap across AI features, third-party integrations, and publisher revenue systems across India, MENA, and the US.
- Defined and shipped Voiro Genie — an LLM-powered conversational data assistant built on RAG pipelines and vector databases — enabling non-technical publisher teams at Flipkart, Myntra, and Zee5 to query revenue data in natural language.
- Shipped the DRR (Daily Revenue Reconciliation) system: a three-layer observability stack covering schema validation, 7-day rolling average deviation alerts (40% threshold), and 15-day audit cycles — enabling proactive client communication and reducing revenue reporting errors to near-zero.
- Drove OAuth/SSO implementation (Google and Microsoft identity providers) — eliminated separate credential management, enabled automatic access revocation, and reduced enterprise client onboarding from 2–3 business days to same-day.
- Delivered global integrations (Criteo, DV360, Google Ad Manager, Salesforce, SFTP) expanding data coverage by 4x and improving cross-platform revenue reconciliation accuracy.
- Lead and mentor a team of 2 PMs — own hiring, goal-setting, and quarterly roadmap reviews; established sprint rituals and structured discovery process that reduced average time-to-spec by ~30%.

Product Manager | *Voiro Technology* Apr 2021 – Aug 2024 · Bangalore

- Shipped async line item creation — influenced engineering to build a fully asynchronous flow after identifying synchronous processing as the root cause of timeout failures at scale; covered all edge-case failure modes in UAT and shipped a proactive alert system that users consistently cited as a trust signal.
- Owned delivery of 25+ features; led Mixpanel instrumentation strategy across 5 enterprise clients, cross-referencing feature requests against analytics lexicon to drive data-led prioritisation.
- Led Brand Centre — a self-serve media buying platform — from zero to closed beta with 5 publishers (Zee5, JioCinema, Paytm, PhonePe, Rooter); ran structured adoption analysis at 7 months, found metrics 90% below target, and led the decision to sunset the product — preserving the codebase and embedding kill-criteria frameworks into Voiro's product process.
- Drove 28% improvement in platform task completion and response time through structured KPI tracking, bi-weekly feedback loops with enterprise clients, and sprint-level iteration — reducing average support escalation volume by ~20%.
- Scaled publisher-side ad ops efficiency from a 2:1 to 4:1 salesperson-to-ad-ops ratio within six months through workflow automation — freeing ops capacity for higher-value revenue activity.

Senior Executive — Ad Revenue | *Disney+ Hotstar* May 2019 – Mar 2021 · Mumbai

- Owned digital ad revenue reporting infrastructure for high-scale live events (IPL 2020, ICC World Cup) across a ~\$100M annual ad revenue operation; built BI pipelines that reduced daily reporting turnaround by 70% — from 2+ days to same-day — directly informing executive revenue pacing decisions.
- Built executive dashboards in Power BI and Looker studio spanning in-app ad formats (pre-roll, mid-roll, banners, interstitials) and programmatic demand sources including Magnite (SSP) integration.
- Contributed revenue and inventory insights to the in-house ad server product team during early build phase — provided operational data on reporting gaps, pacing edge cases, and publisher behaviour patterns that informed product decisions.
- Partnered with ad product and ad ops teams on campaign configuration and inventory analysis; synthesised performance data across advertiser segments to surface optimisation signals for revenue leadership.

Product Operations Analyst | [Media.net](https://www.media.net) Jul 2017 – Apr 2019 · Mumbai

- Designed and ran A/B tests on ad placement configurations and publisher page layouts across 20+ premium publishers (including Forbes, WebMD) — synthesised results into structured product briefs that directly influenced contextual ad configuration decisions for the demand team.
- Analysed publisher performance data using SQL and Apache Hive to identify monetisation gaps across inventory segments; translated findings into prioritisation inputs for ad product roadmap planning.
- Supported Singapore market entry by mapping publisher inventory patterns against regional demand signals — contributed data-backed assessments that informed go/no-go sequencing for contextual advertising expansion into the APAC market.
- Identified anomalous traffic on a publisher account through IP-level, device-level, and CTR analysis — surfaced a spam pattern driven by a single IP source and presented a clear recommendation to the business team; outcome: stricter spam detection filters implemented, invalid payouts stopped. Early lesson: data without a recommendation is noise.

SIDE PROJECTS

- Release Notes Automation — Identified a recurring pain point in CSM release communication; scoped, built, and shipped an end-to-end tool automating release note generation from Jira with OTP auth, inline editing, drag-to-reorder, and multi-format export. Adopted internally. Live: [releasenotes-one.vercel.app](#)
- PRD Rater — Built an internal AI-powered story quality tool: junior PMs submit Jira ticket links, the system fetches descriptions via Jira API and evaluates them across a weighted 40-point rubric (technical clarity, acceptance criteria, logic completeness, PRD structure) with full product context injected as system prompt — ensuring only high-quality stories reach engineering and eliminating the PM-to-engineering handoff gap.
- PM Mentorship — Mentor aspiring and early-career PMs at Airtribe; conduct mock interviews, review product case submissions, and help candidates structure their product thinking for Senior PM roles.

SKILLS

AI Products: LLM Applications, RAG Pipelines, Conversational AI, Agentic Workflows, Prompt Engineering, Vector Databases, AI Evaluation & Feedback Loops

AdTech & Publisher: Programmatic Advertising, DSP, SSP, RTB, Publisher-Side Ad Ops, Google Ad Manager (GAM), DV360, Criteo, Revenue Pacing, Contextual Advertising, In-App Advertising

Product Management: Product Strategy, Roadmapping, Go-To-Market, Enterprise SaaS, Cross-functional Leadership, Team Leadership, Stakeholder Management

Analytics & Data: Mixpanel, SQL, Power BI, Tableau, LookerStudio, Product Analytics, Revenue Instrumentation

Integrations: REST APIs, Salesforce CRM, Google Ad Manager API, n8n, SFTP, Jira

EDUCATION & CERTIFICATIONS

B.E. Information Technology — St. Francis Institute of Technology, 2017

Product Analytics — Product School | Product Management — Udemy

AWARDS

Employee of the Quarter — Vairo (2025) | Employee of the Quarter — Vairo (Aug 2024) | Outstanding Newcomer — Vairo (May 2021) | Employee of the Quarter — Disney+ Hotstar (Nov 2020)
